About PV CYCLE

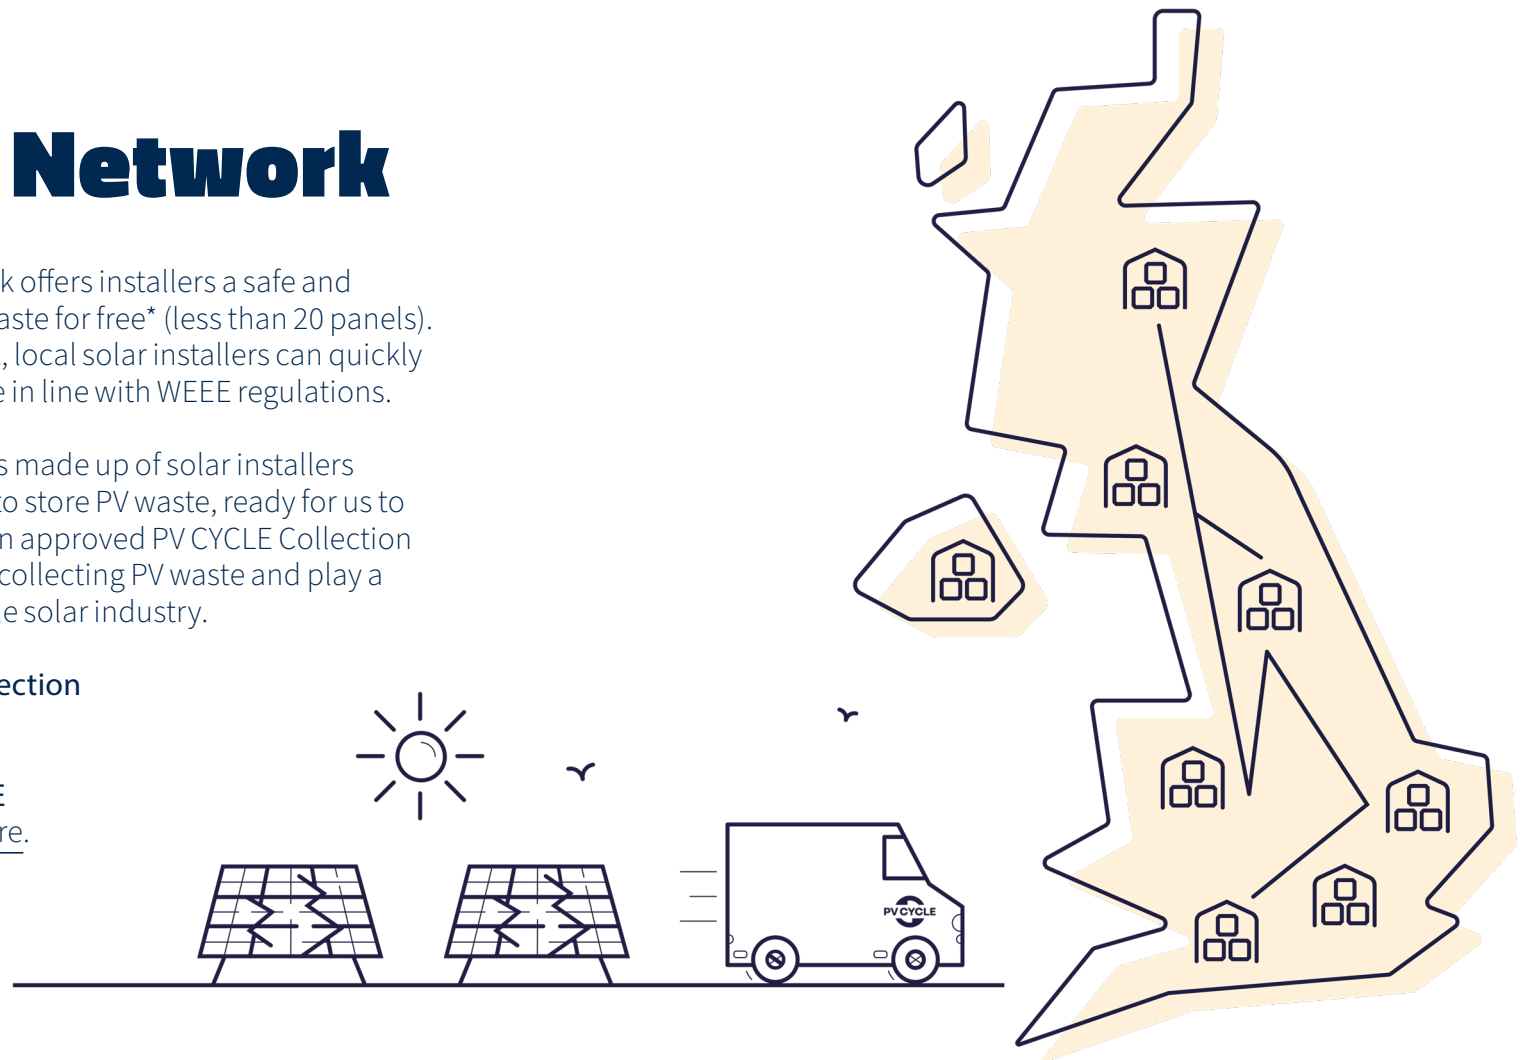

# Collection Network

Our fast-growing collection network offers installers a safe and sustainable way to dispose of PV waste for free\* (less than 20 panels). With locations found across the UK, local solar installers can quickly and easily dispose of their PV waste in line with WEEE regulations.

The PV CYCLE Collection Network is made up of solar installers across the UK who have the space to store PV waste, ready for us to pickup and recycle. By becoming an approved PV CYCLE Collection Network Point you will get paid for collecting PV waste and play a crucial part in building a sustainable solar industry.

About PV CYCLE

# How our Collection Network works

Join our pioneering take-back and recycling scheme and help us build a solar circular economy where PV panels are stored, collected and recycled responsibly.

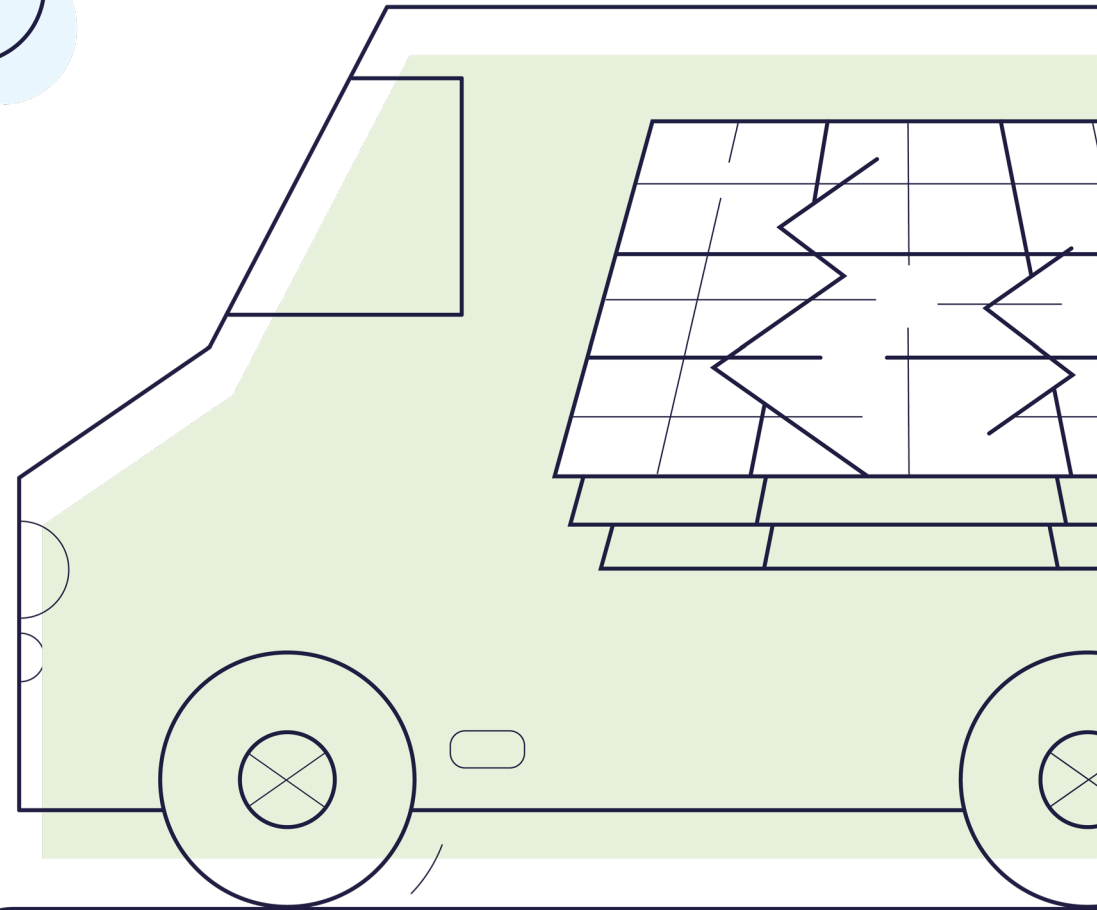

# Drop off

With a growing number of locations across the UK, the PV CYCLE Collection Network gives installers a simple and sustainable way to dispose of PV waste – for free\* (less than 20 panels). Our friendly collection points take your broken or damaged PV panels ready for collection and recycling. The service is available for domestic customers and professional MCS accredited installers with fewer than 20 panels. Commercial or utility scale solar farms or installers with more than 20 panels should contact us directly to arrange a collection.

**If you have fewer than 20 panels,** find your nearest PV CYCLE Collection Network Point [here](#).

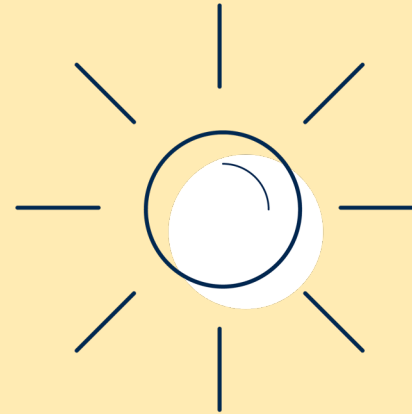

**If you have more than 20 panels,** please contact us directly at [info@pvcycle.org.uk](mailto:info@pvcycle.org.uk)

**About PV CYCLE**

# About PV CYCLE

As Europe's leading PV recycling association, we are working with industry partners to build and maintain a more sustainable solar industry.

PV CYCLE was founded in 2007 as a not-for-profit association offering solar businesses expert advice and guidance on all WEEE and PV-related compliance. Over the past decade we have processed and recycled more than 650 tonnes of PV waste and we are leading the industry to set up the infrastructure and logistics to process future waste volumes.

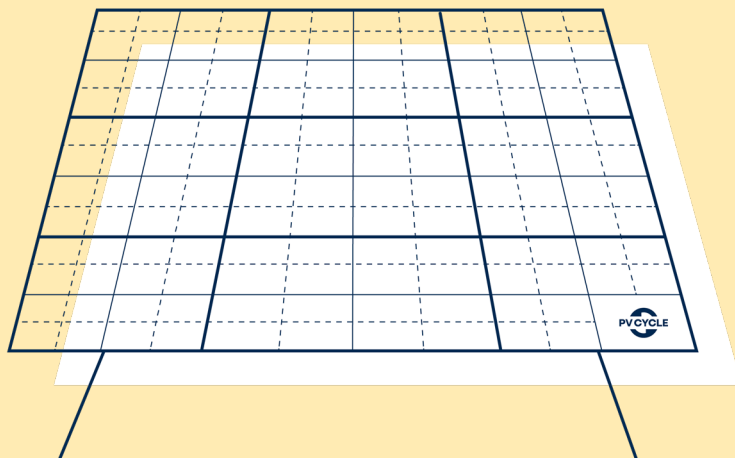

We are approved by the Environment Agency as a Producer Compliance Scheme (PCS) and are currently the only PCS focusing on the needs and requirements of the solar industry.

We believe in the power of working collectively and collaboratively, consulting with our industry partners to provide sound advice and practical solutions to PV waste and compliance challenges.

We are involved in a number of research opportunities to help spearhead solar recycling, and use our knowledge and experience to lead the industry forward.

Growing our pioneering Collection Network is a flagship initiative that provides local solutions to a national demand, and we welcome partners to join us.
